

Traitz Academy Community (TAC) — Complete Platform Specification

URL: academy.traitz.tech/community **Prepared for:** Dev team **Stack:** Laravel + Vue **Nature of project:** TAC is a long-term, ongoing community — not a campaign or time-boxed page. It launched in September 2026, but the platform must be built to run and grow indefinitely, with a continuous stream of members, activities, and leadership cycles. Every part of this spec should be designed for sustained use over years, not a single season.

1. Vision & Purpose

TAC exists to keep the Traitz Academy ecosystem alive between and beyond internship cohorts. Its goals:

- Stay closely connected to students and tech enthusiasts on an ongoing basis
- Give interns and past interns real leadership roles and a path to grow within the community
- Keep Traitz Academy active year-round, not just during internship cohorts (e.g. HORT 7.0)
- Generate steady, recurring revenue for Traitz Academy

TAC is a **Traitz Academy** initiative. The website should present it on its own terms, as a standing community in its own right.

2. Community Identity

- TAC is a persistent home base for anyone who has passed through, is currently in, or wants to be part of the Traitz Academy world.
- It should feel like a standing institution with its own identity, not a page bolted onto the internship program.
- The site should communicate credibility and permanence: this is not a one-off recruitment drive, it's a movement people join and stay in.

3. Organizational / Team Structure

The site needs a dedicated **Team / Leadership** page and data model reflecting the full TAC leadership hierarchy. Roles to support:

- **Lead** — overall head of TAC
- **Co-Lead** — deputy/second-in-command
- **Secretary** — records, communications, administration
- **Technical Lead(s)** — oversee technical direction/execution across tracks
- **Per-track Mentors** — one or more per track (Web Development, Mobile App Development, UI/UX & Graphic Design, AI & Machine Learning, Networking & Cybersecurity, Digital Marketing, Data Science, Arduino Programming for IoT)
- **School Leads** — represent/organize TAC presence at specific schools/campuses
- **Partnership Leads** — manage external partnerships and sponsorships

Requirements:

- Each role should be a structured entity in the backend (not hardcoded text), with: name, photo, role title, track/school (where relevant), bio, contact/social links, start date in role
- The team page should be able to group by role type (e.g. all School Leads together, all Mentors grouped by track)
- Leadership changes over time (terms, rotations, promotions from within), so the admin panel must support easily adding, editing, retiring, and re-assigning leaders without a code deploy
- Consider a public-facing “leadership timeline” or “alumni leaders” list eventually, since this is long-term — today’s members become tomorrow’s leads

4. Membership & Join Flow

4.1 Joining

- Anyone (student, past intern, tech enthusiast) can join TAC directly from the site — this is a core, always-on feature, not a limited-time signup
- Registration form fields: full name, email, phone, school/institution, current status

(student / past intern / tech enthusiast / other), track(s) of interest, how they heard about TAC

- On submission: confirmation message on-site + confirmation/welcome email
- Store members in a `community_members` table, tagged by track, status, school, and join date

4.2 Member Accounts (long-term engagement)

Since this is a long-term community, consider (even if phased in after v1):

- Member login/profile so people can update their info, see their track, and view activity history
- Ability for members to RSVP to events/workshops/competitions
- Member directory (opt-in, privacy-respecting) so people can find others in their track or school

4.3 Admin Management

- Admin view to see, search, filter, and export all members
 - Ability to tag/segment members (by track, school, status, engagement level) for targeted communication
 - Ability to promote a member's status internally (e.g. member → mentor) as people move up
-

5. Tracks

Display and let members select from the tracks TAC organizes around:

- Web Development
- Mobile App Development
- UI/UX & Graphic Design
- AI & Machine Learning
- Networking & Cybersecurity
- Digital Marketing
- Data Science

- Arduino Programming for IoT

Each track should have its own page or section showing: description, assigned mentor(s), upcoming activities in that track, and members in that track (if directory is enabled).

6. Activities & Programming

TAC runs a continuous, recurring calendar of activities, not a fixed set tied to one launch window. Activity formats to support:

- Events
- Workshops
- Trainings
- Bootcamps
- Internships (linking back to the main TraitZ Academy internship program where relevant)
- Handgouts
- Competitions

6.1 Requirements

- An **Activities/Events** section functioning as an ongoing calendar/feed — past, upcoming, and recurring activities
 - Each activity entry: title, type (event/workshop/training/bootcamp/internship/handgout/competition), track/tag, date & time, location (physical/virtual/hybrid), description, cover image, organizing lead/mentor
 - Staff (leads/mentors, per permissions) should be able to create, edit, and publish activities from an admin panel — no code deploy needed
 - Support for recurring activities (e.g. a monthly workshop series)
 - Competitions specifically may need: submission/entry mechanism, judging criteria, leaderboard/results, and prize/reward info
 - RSVP or registration per activity (phased in if not in v1)
 - Archive of past activities with outcomes/highlights (photos, winners, testimonials) — reinforces the “long-term, thriving” identity
-

7. Site Structure (Pages)

1. **Home** — TAC identity, mission, highlights, call-to-action to join
 2. **About / What is TAC** — full explanation of purpose and positioning vs TraitZ Academy internships
 3. **Tracks** — the 8 tracks, each with mentor(s) and related activities
 4. **Team / Leadership** — Lead, Co-Lead, Secretary, Technical Leads, Mentors, School Leads, Partnership Leads
 5. **Activities / Events** — ongoing calendar/feed of events, workshops, trainings, bootcamps, handgouts, competitions
 6. **Join** — registration flow
 7. **Member area** (phased) — login, profile, RSVP history
 8. **Partners / Sponsors** — for partnership leads to showcase collaborators (supports the revenue goal)
 9. **Contact / Get Involved**
-

8. Design Requirements

The brief is explicit: this must be **world-class and complete**, not a basic brochure page. Design direction for the dev/design team:

- Professional, modern visual identity consistent with (or elevating) existing TraitZ branding
- High-quality imagery of real activities, real leaders, real members — avoid generic stock-photo feel
- Strong visual hierarchy: the join CTA should be prominent throughout, not buried
- Mobile-first — most prospective members will discover and join via phone
- Fast load times, smooth navigation, accessible (proper contrast, alt text, keyboard navigation)
- Motion/interaction polish (subtle animations, transitions) appropriate for a modern tech-community brand, without sacrificing performance
- Should feel alive and current — e.g. showing recent activity, recent joiners, upcoming

9. Technical Notes

- **Stack:** Laravel (backend/API) + Vue (frontend)
 - **Data model** should treat members, leaders/roles, tracks, and activities as first-class, related entities (not flat content pages) so the platform can grow: e.g. a mentor is linked to a track, activities are linked to tracks and organizing leads, members are linked to tracks and can RSVP to activities
 - **Admin panel** is essential from v1 — leadership and activities will change constantly over the community's life, and none of it should require a developer to update
 - Plan for scale: the member base and activity history should be expected to grow continuously over years, not level off after a launch window
-

10. Revenue Considerations

Since generating steady revenue is an explicit TAC goal, the platform should leave room for (even if not all in v1):

- Paid workshops/bootcamps/trainings (ticketing or payment integration)
 - Sponsorships/partnerships showcased on a dedicated page
 - Possible membership tiers in the future
-

11. Content the Dev/Design Team Will Need From TraitZ Academy

To build this properly, the team should request:

- Full leadership roster with names, photos, and bios (Lead, Co-Lead, Secretary, Technical Leads, Mentors per track, School Leads, Partnership Leads)
- Brand assets (logo, colors, fonts) if an existing TraitZ/TraitZ Academy design system exists
- Any existing photos/video from past activities, cohorts, or events

- A first batch of upcoming activities to populate the Activities section at launch so it doesn't look empty
-

12. Open Questions for the Dev Team

- Do mentors/school leads get their own login to manage their track/school's content, or does everything route through a central admin for now?
- Should the member directory be public, members-only, or opt-in only, given privacy considerations?
- Should competitions have in-platform submission/judging, or link out to external tools initially?
- Payment provider preference for future paid activities (e.g. MTN MoMo, Orange Money, card processors available in Cameroon)?
- Any target launch/refresh date for this specific page, distinct from TAC's overall September 2026 start?
